INTRODUCTION TO LEARNING MANAGEMENT SYSTEMS

- Learning Management System is a Web-based system for training programs and information sharing between individuals giving them the flexibility to access it from their workplace or home.

- Authorized individuals have 24/7 access to this unique system through URL or through a unique User ID and Password.

- The LMS enables the learning content to be available and/or accessible online thereby allowing students to view and interact with learning materials though a web browser on essentially any computer that has internet access.

- LMS is the framework that handles all aspects of the learning process.

- An LMS is the infrastructure that delivers and manages instructional content, identifies and assesses individual and organizational learning or training goals.

- Web-based and facilitate "anytime, any place, any pace" access to learning content and administration.

- learning management system provides an instructor with a way to create and deliver content, monitor student participation, and assess student performance.

DEFINITION

❖ A **learning management system** (**LMS**) is a software application for the administration, documentation, tracking, reporting and delivery of electronic educational technology (also called e-**learning**) education courses or training programs.

About Forum

- An **Internet forum**, or **message board**, is an online discussion site where people can hold conversations in the form of posted messages.
- Forums have a specific set of jargon associated with them; e.g., a single conversation is called a "thread", or *topic*.
- A discussion forum is hierarchical or tree-like in structure: a forum can contain a number of sub forums, each of which may have several topics.
- Within a forum's topic, each new discussion started is called a thread, and can be replied to by as many people as so wish.

LMS Features

- **Accessibility:**

LMS was designed with accessibility as a priority. A wide range of features ensure assistive technology users can participate fully in student, instructor, and administrative activities.

- **Security:**

Login passwords are encrypted. Forgotten passwords must be reset, rather than retrieved by email, removing the possibility they might be intercepted when being sent over the Internet.

- **File Storage:**

All users on an LMS system have their own file storage utility. File storage areas can also be shared across groups, or an entire course. Version control can be enabled to keep track of drafts or changes to documents.

LMS Features

- **File Manager:**

  Instructors can upload and manage course related files. Directories can be created to sort files, zip archives can be uploaded and unpacked. A popup file manager can be opened alongside the Content Editor or test question editors.

  Course files can be easily linked into content pages or test items as they are being created. Text or HTML files can be created or edited online. Rename files, or batch move or delete files.

- **News & Announcements:**

  Instructors can post messages to the course Home Page to guide students through the course. News can be used for weekly introductions, announcing important dates, or posting critical information. The announcements page is always the first page a student visits when they log into a course.

LMS Features

- **Forums:**

Instructors can create and manage multiple forums for each of their courses. Messages can be edited, deleted, locked from reading and/or replying, and stuck to the top of a thread list if a message is important.

Administrators can create forums shared across multiple courses. Subscribe to forums, or to topic threads to have messages sent by email. Instructors can set a time limit for editing forum posts, so messages can be corrected if errors are made in the original post.

- **Enrolment Manager:**

Instructors may import a comma separated list of students to enrol in their courses, or export an enrolment list for staff keeping or to import into other systems. Create an enrolment list online to add new students to a course. Filter enrollees by login, first or last name, or email address.

LMS Features

- **My Courses:**

  Instructors and students can manage the LMS courses they teach and/or are enrolled in. When a student registers they are automatically logged into My Courses.

- **Course Search:**

  A search engine allows students to search course content, and search for courses in the course catalogue.

- **Course Manage:**

  All LMS tools can be accessed quickly under Manage tab.

- **Content Tracker:**

  Students can keep track of the content pages they have visited.

LMS Features

- **Student Profile:**

  Students can add personal information about themselves for others to see, and include a profile picture, which is also displayed with forum posts. The photo gallery can be used to create a profile album, where a collection of profile pictures can be stored.

- **Blogs:**

  Each group has access to their own blog, to which they can post public messages, available to all course member, or private messages, available only to group members and instructors.

- **Polls:**

  Instructors can create one question polls to quickly gather student opinions.

LMS Features

- **Reading List:**

  Instructors can gather a list of resources (books, papers, urls etc.) related to topics in a course, and create a Reading List based on those resources.

- **Social Networking:**

  All LMS users can develop a network of contacts, create and join interest groups, setup a network profile, and link any of the thousands of remote gadget applications into their networking environment. Photos can be shared across courses, or through the social networking area.

LMS Features

- **Work Groups:**

  Students can collaborate with others on course projects, communicate as a group through the forums, share resources using the File Storage utility, and work together authoring project documents. Exercises or assignments can be submitted to a group leader, or course instructor.

- **Preference Settings:**

  Students can control LMS features and the theme LMS is presented in. Students can control visual display settings, content adaptation settings, navigation controls and learning tools settings. The Preference Wizard is available from anywhere in LMS, to make quick adjustments to preference settings.

LMS Features

- **Backup Manager:**

  The entire content and structure of a course can be backed up and stored on the LMS server, or downloaded and saved to your local computer for safe keeping.

- **Privileges:**

  Through the Enrolment Manager, instructors can assign course members access to various instructor tools, creating teaching assistants or co-instructors.

- **FAQs:**

  Instructors can create a collection of Frequently Asked Questions to provide additional documentation for students.

Getting Started with Classroom

A teacher’s guide to the Classroom app

Introducing Classroom

Classroom is a powerful app for iPad and Mac that helps you guide learning, share work, and manage student devices. It supports both shared and one-to-one environments. You can launch a specific app, website, or textbook page on any iPad in the class, share documents between teacher and students, or share student work on a TV, monitor, or projector using Apple TV. You can even see which apps students are working in, mute student devices, assign a specific shared iPad for each student, and reset a student's password. And when class ends, you can see a summary of your students' activities.

This guide will take you through an overview of Classroom. You'll learn how to get started using the app, and discover how to integrate it into daily classroom workflows.

Before you get started

Classroom is available in the App Store and is easy to set up. You can create classes manually without IT support, or work with your school's MDM administrator to automatically configure Classroom with roster data for students and classes.

Create your class.

With Classroom, you can set up your own classes manually, if your school isn't configuring classroom devices with MDM.

Work with classes created by your MDM.

If your school is using mobile device management (MDM) to manage devices, your school's IT department can fully set up and configure your iPad or Mac with roster data for classes and students. This reduces setup time in class, so you can get started right away. It can also support the school's policies for mobile device use with appropriate settings and restrictions.

Settings for students enrolled in your class using MDM are managed by your school's IT department.

This ensures that student devices are always enrolled in your class and configured with your school's settings and policies.

Organize your class.

Classroom lets you create custom groups within your class, so you can tailor guidance for a single student, a group of students, or the entire class. You can break the class into groups based on project assignment, and guide each group's experience differently.
