1 Objective

Chettinad Health City (CHC) has been using applications both developed in-house and procured from third party vendors. This document describes about the procedure to be followed to ensure that the application management and maintenance is done as per the standard processes to ensure that the services are available to meet business requirements and it is protected from any incidents which may affect the regular business activities.

2 Scope

This document will define and guide the regular development and maintenance of the LMS application with adequate control exercised in its version and backup and restoration activities. Disaster Recovery setup is not included in the current version.

3 Application summary

Learning Management System (LMS) is mainly used for uploading and downloading course materials online. The application is web enabled and can be accessed from internet. Faculties can upload their course materials and Students can download their corresponding course materials. All the events and circular contents are displayed in the user's dashboard. Forum and Blogs are available to share the student's thoughts with faculties.

HOSPITAL INSTITUTE
IT HIGHWAY, NEELAPPAKKAM
KANCHIPURAM DIST - 603 103

4 Application Technical architecture

The LMS application is developed using PHP and hosted in an apache Server. The database used is MYSQL and the application is hosted in a windows environment.

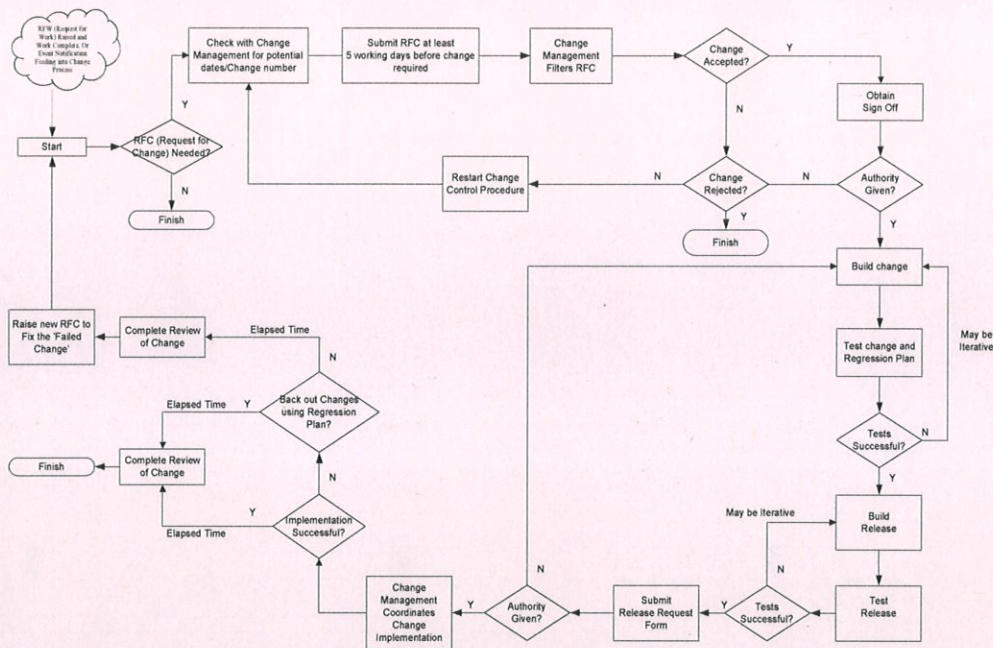

5 Change management

The Change Management Plan establishes how changes will be proposed, accepted, monitored, and controlled. The change control procedures identified in the Change Management Plan will govern changes to the baseline project scope including changes to the work breakdown structure and requirements from project inception through to completion. In addition, the change control procedures will govern changes to the baseline schedule and cost. This Change Management Plan addresses the following activities:

- Identification and inventory of change requests
- Analysis and documentation of the complete impact of requested changes
- Approval or rejection of change requests
- Tracking changes and updating of project documentation to account for approved changes

Any changes to the production instance should strictly follow the change management process and a formal request should be raised and submitted to the change approval authority after proper evaluation of the proposed changes to the application. The broad process flow is given below for guidance and change request can be submitted through email to the following members for approval.

RFC -> Process owner

6 Version control

Since LMS is a custom made application cater to internal needs, a proper version control as per standard practice is hard to maintain and not strictly applicable for the environment. However any changes to the source code to be governed as per change management principles stated earlier and copies of the last three months changes to be maintained in backup sets for emergency rollback and trouble shooting. Any changes to the production version should be tested first in the test environment and then to be migrated to production as per policies and procedures prescribed. ITIL based help desk system to be used for operational process governance.

7 Backup Procedure

The LMS application as well as MY SQL databases has to be backed up regularly to ensure that the latest version of the software and its data is stored in a safe place so that it can be retrieved in the event of a disaster or major issue to the production instance of this application. The LMS application is having following instances

Backup Description & Frequency

The LMS application and its various instances are to be backed up as per the following backup schedule and frequency. Any unsuccessful attempt should be reported as an incident in the issue log and proper root cause analysis to be done to close the problem ticket.

| Instance | Description | Path to Backup | Type | Frequency | Device | Responsible | Record |
|-------------|-------------------|---|---------------------------------------|-------------|-------------------------|------------------|------------|

Name and Features

Maintenance of stock: This is a very important feature of all library software. With the help of library system, we can maintain the stocks such as books, newspapers, magazines more efficiently. With the help of this feature our manual works have reduced to a great extent. This feature also helps in editing or deleting the data, if required.

Classification of stocks : The system classified stocks according to author name, publication, subject, department, category, price, edition, year, etc...

Search: The ILMS provides search option to the librarians which makes their work fast and easy. Librarian can search stock in seconds.

Fine calculation: It keeps track record of each and every stock. ILMS automatically calculates due dated of each borrowed book and calculate fine accordingly.

Report: The system audits the entire library in no time and generate reports accordingly, which makes the work of a librarian very easy.

Periodicals: It can be understood as an item that comes on a regular basis, such as newspapers. The system handles these appropriately.

Manages demands: It keeps records of the demand by the students of those item that are currently unavailable.

Auditing: Auditing the entire library is only a matter of seconds with the help of this ILMS.

Nature and Extent of automation

It is essential in any Library Automation System that Circulation control is clear and provides all the important information at the press of a key. If a queue of borrowers begins to build at the issue desk it can be very frustrating to have to plough through numerous menus to get to where the issuer needs to be. With this in mind we have concentrated on making everything required available from one screen and logically arranged.

At the click of a mouse, library staff can see all the items on pending to a student, with those overdue clearly indicated. Other information such as the students reservation details, students history, is all available by clicking the appropriate links.

Detailed student information can be held in LIBRARIAN to assist library staff in both the general circulation of items and the production of reports and statistics.

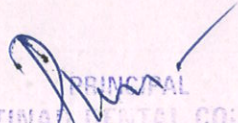

It is sometimes useful for library staff to be able to check the identities of potential users before issuing items, one method of doing this is to issue cards with photographs pasted onto it.

Year of commencement and completion of automation

Year of Commencement: June2017

Year of Completion: December2017

Year of start Using: January2018

All the fields in the red color are mandatory.

- First you need to select the title, enter the first name, and enter the date of birth. If date of birth is not known, you can enter the age in years.
- Enter the father name, address and mobile number. Nationality will load default as Indian and patient type will come automatically as General.
- These details are the mandatory details that are to be entered. The other details such as Middle name, Last name, Patient Occupation, Marital status, Father Occupation, City, District, State and Blood Group are all optional fields.
- The other tab details such as Emergency contact, Guarantor, Visa detail are also optional. You can click on the Baby born checkbox if it is a new born baby. Once you check that checkbox, the Mother's Detail tab will be enabled and that particular baby can be linked to the mother by selecting the mother's code. Once after entering all the mandatory fields and other

necessary details of the patient, you can click on Add. The shortcut key for clicking add button is pressing (Alt + A).

- If the Print Label check box is checked which is at the top right side of the screen, then once you save the record, immediately it will print the label which contains different barcode labels to attach it to the MRD file. Once the label is printed, it will redirect to the current visit screen, where the visit details are selected which is explained in the current visit screen.

Current Visit (Self-Paying Patients)

Consultation Visit type

First Visit

This screen allows you to enter the current visit details of the patient. Once the patient registration screen is saved and label is printed, current visit will open automatically.

- Once the current visit opens, the patient details will be loaded automatically and provider code should be selected from the finder by clicking on the finder button or pressing the F5 key.
- Once the finder button is clicked, it opens a search list and the particular provider can be selected where the patient wants to visit or click on the finder button of the department, select the particular department where the patient wants to visit and select the particular provider in that department.
- The billing code of the particular provider will be automatically selected which indicates the visit whether it is first visit or free or revisit.

Referral visit

When a patient comes for the next time to the hospital, if he visits the different doctor in the different department, then it will take referral visit. You should open the current visit, enter the patient code in the patient code textbox or click on the finder button and select the particular patient from the finder list. Once the patient is selected, click either on the department id finder button or the provider code finder button. If the department id is selected, then click on the provider code finder where it will show only the providers who are in the particular selected department. Select the provider. Once the provider is selected, enter the billing code by clicking on the finder button and selecting the referral visit from the finder list.

 RESEARCH INSTITUTE
 IT HIGHWAY KELAMBAKKAM
 KANCHIPURAM DIST - 603 103

Once the above mentioned types of visits are selected, you can click on the add button to save the current visit record.

Non Consultation Visit type

This visit is for the service patients where they won't be visiting the doctor. For such cases, they need to open the current visit screen and select the patient by clicking on the finder button or by entering the patient code in the text box. Once after selecting the patient, select the visit type as non-consultation. Once the visit type is selected, the provider code and billing code fields get disabled. So you need to select only the department id to which the patient wants to visit. Once after selecting the department, you can save the current visit by clicking on add.

ADMIN General ENT Billing Counter

Once the current visit is saved, it will redirect the screen to the OP Bill entry screen. This screen is used to do the billing for the particular consultation of the visit and also to do the service bill. The bill details for the particular consultation selected in the current visit are displayed in this screen. The price of the consultation will be loaded automatically.

- Check the price of the consultation.
- Click on the receipts tab to change the mode of payment.
- Click on pay mode finder button. It opens a finder list where you can select the mode whether it is cash or card or credit card.
- The default counter will be general counter. when an evening consultation occurs, while billing it will automatically pops up the message like below:

PRINCIPAL
CHETANAD DENTAL COLLEGE &
RESEARCH INSTITUTE
IT HIGHWAY KELAMBAH RAM
KANCHIPURAM DIST - 603 103

- Click on Yes to change the counter in the receipts tab, the screen automatically redirects to the receipts tab, change the counter and save the bill.
- If it is cheque or card, enter the Cheque/ Card No and enter the date.
- Click on save to save the bill.

Note:

- **Once the bill is saved, it can't be edited rather it has to be cancelled.**

Discount Patients

For a discount patient, you need to order the services for that patient where the higher authority will select the patient in a separate screen and give discount. Later you should bill for that particular service.

- Go to IDMsys Nursing Station → OP Ordering
- Double click on the OP ordering, select the patient id, select a particular service which needs to be ordered from the respective tabs.
- Click on confirm and post.
- Now the higher authority will give the discount and later you should go to OP Bill entry and select the same patient where all the ordered services will come automatically.
- Now save the bill.

Service Patients

For Service patients, Double click on the Service patient button in the OP Bill Entry screen which will redirect to a registration screen where in you can register the service patient by entering name, age, department and provider. Now click on save. After saving, those patient details will load into the bill.

Once the details load into the bill, Click on the finder button of the billing code in the grid and select any service from the finder list.

Now click on save to save the bill.

- On the Left hand side of the Bed Status screen, you will find different buttons like
 - Vacant
 - Reserved for Patient
 - Admitted
 - Check-in
 - House Keeping
 - Dis-Infection
 - Maintenance
 - Pre Discharge
 - All
- You should click on these buttons to see the status of the beds. For example, click on the vacant buttons so that it will filter all the vacant beds in all the wards. Color of each of these buttons can be set in the options.
- You can also search for a particular bed type and ward by clicking on the finder button of the From Bed type and To Bed type.
- You can also search a patient by Patient Name, Patient Code and IP Code by selecting from the combo box of "Search Type" and entering particular patient name or patient code or IP Code in the next field or by clicking on the finder button and searching.

- Once after selecting the bed from the above screen, the bed details will be loaded in the admission U.I as shown below.

- Now after entering the bed details, you can also enter expected discharge date which will be loaded as From date and Time by default.
- Now click on the finder button of the In charge provider (In charge provider is nothing but Doctor who is in charge for that particular patient).
- Once after selecting the In charge provider, Admitting provider and department will be loaded automatically same as the In charge provider.
- Now before saving the Admission, Customer type differs in the following ways:
 - Self Paying

1. The customer type will be Self Paying by default, so for these kinds of patients, you can just click on Add so that it will generate an Admission Code on top of the screen which is also called as IP Code.
- Corporate Clients or Insurance Patients
 1. If the patient is a Corporate client or an Insurance patient, then select the customer type as Corporate client from the customer type combo box and click on the finder button of the Plan Code in the grid, once the finder opens, select the particular

Registered Patient

- Once you open the admission screen, you need to click on the finder button of the patient code and select a particular patient from the list who is already registered.
- Now follow the same steps from point (ATD-*).

Specimen Receipt at Lab

This screen is used to receive samples at the Lab i.e a place where all the samples are segregated to its respective departments or sections such as Hematology, Bio-Chemistry, and Clinical Pathology etc.

This screen shows the location as Specimen Collection location by default and the specimen that is collected at the collection counter is displayed in this screen. Once the specimen comes to this area physically, then you need to double click on the received status which will be No by default. Once you double click on the received status, it changes to yes which means that the sample has been collected at the Lab Location. Once after changing the status to yes, you need to click on Confirm.

Appointment Module

Index

This training manual is designed in order to make the users understand the software better and can be used as a reference material at any time. This training material is intended solely for the usage of users at the clients place. Any further clarifications apart from this material should be requested to the IT department.

Appointment Module is used to give Appointments to the Patients so that patients can book their slots towards their desired Provider as per the availability of slots and Provider. Appointments can also be booked through the Phone.

Contents

Client Appointment

Go to I/A Transaction → Click on Client Appointment: Appointment screen gets opened, this screen is useful to give Appointments or to view Appointments depending on the Department Name and Clinic Name

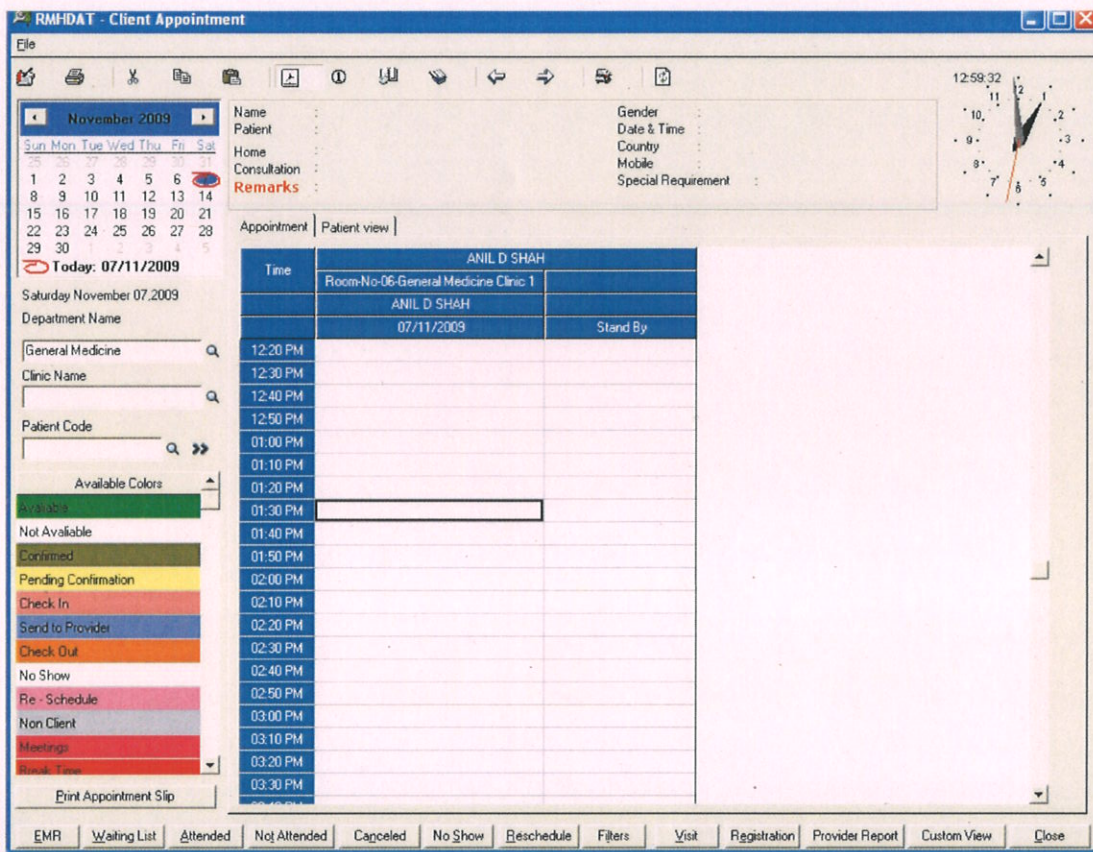

Menu of the Client Appointment has Icons, if mouse is pointed on the Icon it displays its corresponding functionality like: New, Print, Cut, Copy, Paste, Today's, Day (1), Week (7), Month (31), Previous Day, Next Day, Drill Down and Refresh

Client Appointment screen has 2 Tabs: 1) Appointment and 2) Patient View

Left side of the Client Appointment screen shows a Calendar box , Department Name Text Box and Clinic Name Text Box to select Department & Clinic.

'Available Colors' option displays the status of Appointments.

EHR (Electronic Health Records) Module

Index

This training manual is designed in order to make the users understand the software better and can be used as a reference material at any time. This training material is intended solely for the usage of users at the clients place. Any further clarifications apart from this material should be requested to the IT department.

EHR Module is used exclusively by the Doctors (Providers) to scrutinize the Patients Data and to store the Patient's data into electronic records. This Module stores from Patient basic personal data to his Health status data. This Module also stores the Past Medical History of the Patient's and also Allergies, Hereditary diseases of the Patients.

Contents

EHR Provider Desktop

EHR Provider Desktop

Screen Name itself suggests that its for Provider, This module is Provider specific and Department specific, Every Provider should Login with his User Id and Password then only he can view his specific Patients (given by Appointments) or his Department specific Patients (need to be set in 'Options').

Whenever a Patient is 'Check In' in Appointment screen that Patient will appear in the EHR Provider Desktop depending upon Provider's 'Logging In' to the application.

Go to M/E Transaction → Click on EHR Provider Desktop: EHR Provider Desktop screen will get opened

PRINCIPAL
CHETTIYAR DENTAL COLLEGE
RESEARCH INSTITUTE
IT HIGHWAY METAMBAKKAM
KANCHIPURAM DIST 683 104

This Screen has buttons on the Top like My Day, Patient Chart, Patient Summary, Discharge Summary, and Diagnosis.

If we click on My Day the screen gets refreshed and it will display the Patients list under Appointments Tab

This screen mainly has 3 Sections:

First Section shows the list of "Patients", Second section shows "Alerts and Reminders" and Third Section shows the status of "Visits".

Principal
 CHETTIYAR DENTAL COLLEGE &
 RESEARCH INSTITUTE
 IT BANGALORE PILLAMBARKAM
 KANCHI DIST - 603 104

- The First Section has 3 Tabs:

- 1) **Appointments**: Displays Patients came through Appointment
- 2) **Generic Patients**: Displays Patients who came without any Provider selection, these patients are Department specific not Provider specific
- 3) **In Patients**: Displays Admitted Patients.

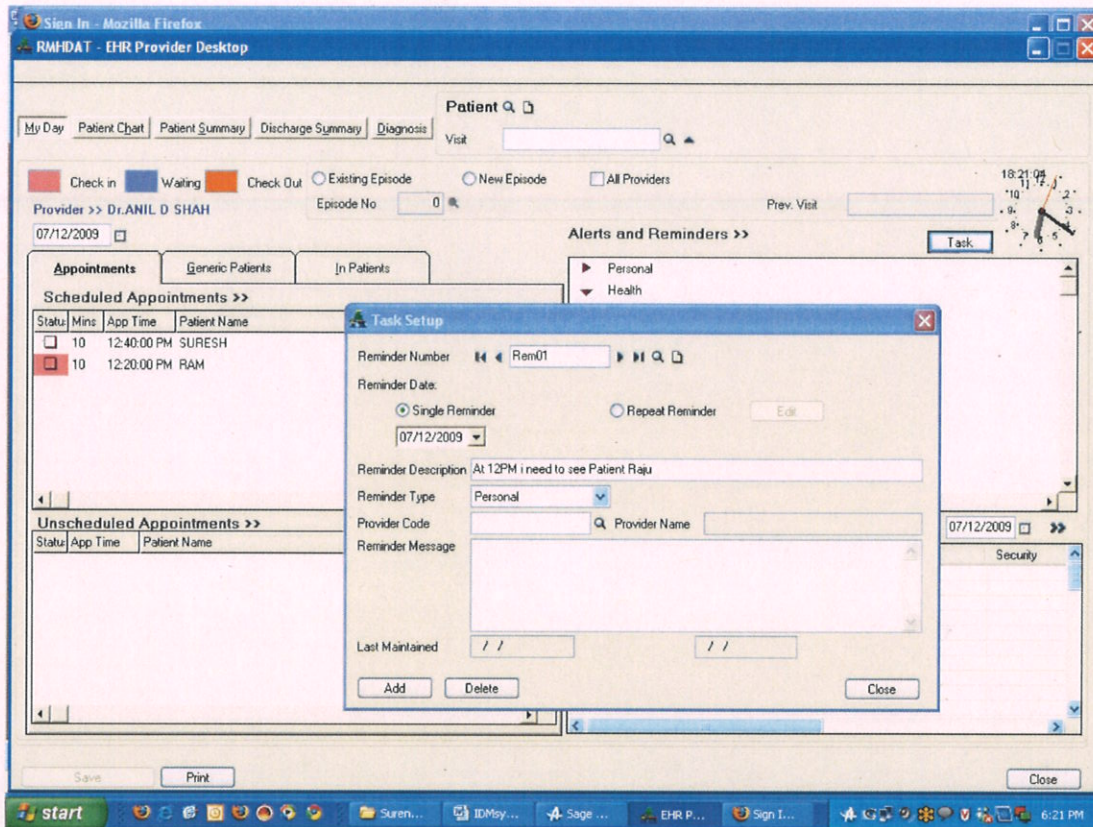

Unscheduled Appointments>>: Displays the Patients who are Walk-In Patients, i.e. came directly without any Appointment.

- The Second Section has “**Alerts and Reminders>>**”: Here Provider can add any type of Alerts/Reminders and even he can send Alert/Reminder to other Provider, he can add Personal Reminders, Health related Reminders or if he want to see any Patients Lab/Radiology Results or if Provider want to Prescribe some medicines to the Patient then he can keep Alert/Reminders.

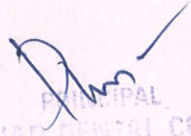

Whenever a New Reminder is added depending on the Reminder Type that will get added to the down listed Items like Personal, Health, Lab Results, Radiology Results and Prescription

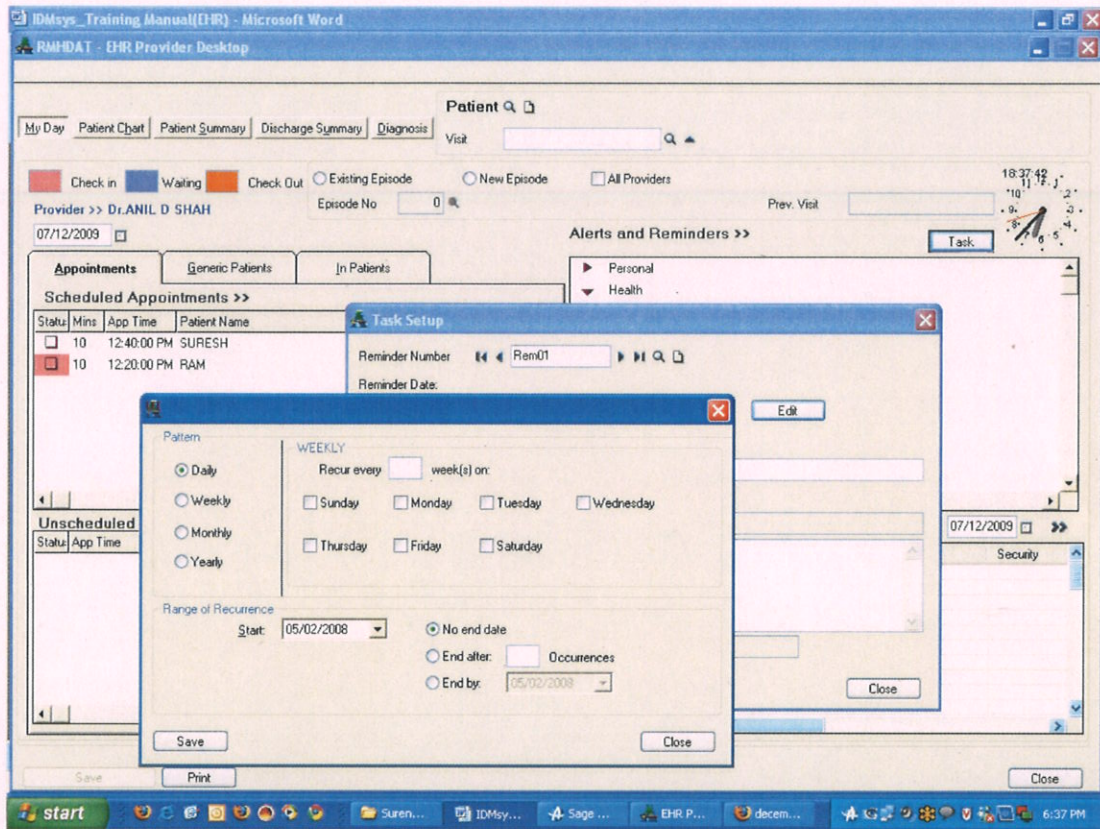

If we want to see the Alerts/ Reminders just double click on the listed Items, it will display all the Reminders for that particular Provider under that Reminder Type.

To add new Alert/Reminder, Click on “**Task**” button, Task Setup window will get opened.

- Mention some Reminder number in Reminder Number Text Box, for example Rem01, Rem02, etc...
- Reminder Date: Select Radio Button whether Single Reminder or Repeat Reminder, if we select Single Reminder and the date then it will remind on the particular date selected, if we select Repeat Reminder then Edit button will get Enabled and if we click on Edit button one more window will get opened which has selection of Pattern, Weekly and Range of Recurrence

- Enter Description of the Reminder in the Reminder Description Text Box
- Select Reminder Type from the Reminder Type drop down list
- If the Reminder is for the logged in Provider then no need of selecting Provider code, if it is for the other provider then we have to select Provider code from the Finder, then this Reminder will get added to that selected Provider.
- If needed we can give brief description under Reminder Message Text Box
- Click on Add Button to Add the Reminder.
- Click on Delete Button to Delete the Reminder.
- Click on Close to Close the Task Setup Window.

- The Third Section is “**Open Visits>>**”: Under this section we can see the status of the visits whether its WIP (Work in Progress), Under Review or Close

Select Status from the drop down list, i.e. WIP/Under Review/Close and select the Date Range and then click on Process button, then the down detail grid will display the patients list and visit status accordingly. (Status of WIP is set in M/E Options→Color Codes→ WIP No. of hours, till this time status will be WIP and after this time period status changes to Under Review and once the Provider finishes reviewing the Patient he will change the status to close)

Process Flow:

Provider>>: Shows the Name of the Logged in Provider

- Click on My Day Button, the screen gets refreshed and the Patient list will appear under the Appointments Tab/Generic Patients/Inpatients/Unscheduled Appointments depending on the Visit Type/Appointment Type.
- Click on Appointments Tab: It will display all the Patients who came through Appointment for a particular Provider under Scheduled Appointments.
- Color in the 'Status' column represents the status of the Appointment like Check In, Waiting or Check Out (which is pictorially represented at the Top of the screen)
- Double click on the Patient Name, then the selected Patient will disappear from the Patient List and the details will get added to Open Visits Section with the corresponding status. Patient Name, Date of Birth and Visit Id will be shown at the Header of the Screen.

- Select New Episode(If Patient has come for the first time with that Problem) and click on 'Patient Chart' button
- Click on "Nursing Assessment and Screening" button which is at the left side of the Patient chart screen, Nursing Assessment & screening window will get opened.

The screenshot shows the 'RMHDAT - Nursing Assessment & Screening' application window. At the top, there's a menu bar with 'File' and 'Help'. Below it, a header section contains 'Assessment Code' (with a dropdown for 'NEW'), 'Vital Date' (08/12/2009, 11:31:53), 'Case Type' (Out Patient), 'Visit Code' (OF00000238), 'Patient Code' (MH00000157), and 'Patient name' (SURENDER). The 'Patient Details' section includes 'Sex' (Male), 'Marital Status' (Single), 'Age' (27 Yrs 0 mth 0 days), 'Visit Date' (08/12/2009), and 'Visit Time' (10:54:46). A series of tabs at the bottom of this section includes 'Chief Complaint', 'Nursing Assessment', 'Vitals Flow Sheet', 'Social, Economic Assessment and Functional Screening', 'Review of Systems', 'Nutritional Screening', and 'Fall Risk Assessment'. The 'Nursing Assessment' tab is active. It contains a 'Chief Complaint' section with a text box and a search icon, and a 'Description' section with a larger text area. To the right is a 'General Information' section with dropdown menus for 'Mode of access' (Ambulatory), 'Reason for visit' (Treatment), 'If female' (Pregnant), 'Received from' (Home), 'Diet' (Regular), 'Languages spoken' (Arabic), 'Accompanied by' (Patient), and 'History taken from' (Patient). There is also a 'First visit' checkbox. Below this is a table with columns: 'Generic C...', 'Generic Name', 'Item Code', 'Item Name', 'Dosage', 'Duration', 'Order Date', 'Dispensed Dt', and 'Ad'. The table is currently empty. At the bottom of the window are 'Add', 'Print', and 'Close' buttons.
