HISTORY

- According to Williams et al. (2002), the first reference to rotary instrumentation was made by Ottomano (1892), who used fine needles with rectangular cross-sections that could be adapted to a dental handpiece.
- William J. Rollin (1899) developed the first endodontic handpiece for root canal instrumentation that was used with specially designed needles at 100 rpm (Miles 1987).

In 1938, CURTNER King **Crown Angle** was developed by the Australian Company W and H (Combined rotational and vertical motion of the file)

Recording

• Shaping refers to a specific cavity form with five design objectives:

1. Develop a continuously tapering conical form in the root canal preparation.
2. Shape the root canal with the narrowest cross-sectional diameter at its terminus.
3. Make the preparation in multiple planes.
4. Never transport the foramen.
5. Keep the apical foramen as small as practical.

Rules of the game.....

Dr Chakravarthy A's screen

Recording

- **Glide path / Guide path**
smooth canal – distinct, follow –
prevent blockage/ bending
- **Preflaring**
prevent risk of taperlock of 1st
rotary tip – preliminary root
canal enlargement

DIFFERENT WHITE LESIONS OF TEETH

BY:
DR.REVATHY PARTHASARTHY

RISK BASED CARRIES MANAGEMENT

Restorative Options	without PPR	with PPR	With/without enamel defects	restoration/enamel defects
Preventive	Fluoride toothpaste, fluoride tooth powder, fluoride mouthwash, fluoride varnish	Fluoride toothpaste, fluoride tooth powder, fluoride mouthwash, fluoride varnish	Fluoride toothpaste, fluoride tooth powder, fluoride mouthwash, fluoride varnish	NA
Restorative	NA	Resin composite, Compomer, Gioner, PMRC, RMGIC, SSC, amalgam	Resin composite, Compomer, Gioner, PMRC, RMGIC, SSC, amalgam	Resin composite, Compomer, Gioner, PMRC, RMGIC, SSC, amalgam
Rehabilitation	NA	Full coverage crown, tooth-colored crown, porcelain or veneers	Full coverage crown, tooth-colored crown, porcelain or veneers	Full coverage crown, tooth-colored crown, porcelain or veneers

Cast restorations can be full coverage crown, tooth-colored crown, porcelain or veneers. And they are not advisable in early post-eruptive stage (large pulp size, short crown height...)
 Restorative options include glass ionomer cements (GIC), resin-modified glass ionomer cements (RMGIC), polyacid modified resin composites (PMRC), resin composites (RC), amalgam, stainless steel crowns (SSC), and indirect adhesive or cast onlays or crowns.
 (William et al, 2008) Concerning adhesive and fissure sealant for the posterior teeth that are important before breakdown occurs, Lygidakis et al. in 2010 suggested that higher retention rates could be achieved if a 5th generation bonding adhesive is applied prior to fissure sealant application.
