4.Tooth PASTE

5.CLINDAMYCIN

10/6/20 Pharmacology Dr. Saravathy Meena
MDS J & F

3. Anesthetics

LA

A local anesthetic is a drug used to reversibly prevent the transmission of nerve impulses in the area where it is applied without affecting consciousness.

Mode of Action of LA

- Induce loss of sensation hence locally relieving pain in a well defined area of the body.
- when propagation of a nerve impulse is prevented, there will be no sensation/impulse reaching the CNS/brain.
- Local anesthetics / LA's all exerting their conduction blocking effects by reversibly blocking the movement of sodium inside the nerve axon required for action potential.

10/6/20 Pharmacology Dr. Saravathy Meena

4) Atropine

- Introduction
- Spectrum of activity
- Mechanism of action
- Clinical pharmacology
- Indications
- Uses
- Dose: adult 1-2mg
- Contraindications
- Side effects

Introduction:

- Atropine is a tropane alkaloid.
- Anticholinergic, produced by the demethylation of hyoscyamine, a tropane alkaloid.
- tropane alkaloids which appear and act with range of structures.

10/6/20 Pharmacology test Dr. P. V. Prashant
P & S

① Augmentin

Synopsis:

- ☞ Due to the characteristics of dental settings, the risk of cross infection may be high between dental practitioners and patients.
- ☞ For dental practices and hospitals in countries/regions that are (potentially) affected with COVID-19, strict and effective infection control protocols are urgently needed.
- ☞ It is precisely during the COVID-19 epidemic period that an adequate management of the oral health of children becomes of crucial importance by implementing specific protocols relating both to the pathologies of the oral cavity that normally do not represent an emergency and to those clinical situations that fall within the category of pediatric dental emergencies.

Original Article

Single-nucleotide polymorphism in Vitamin D receptor gene and its association with dental caries in children

Victoria Guru Aribam, Nalini Aswath, Arvind Ramanathan¹

Departments of Oral Medicine and Radiology and ¹Human Genetics Research Laboratory, Sri Balaji Dental College and Hospital, SRM University, Chennai, Tamil Nadu, India

ABSTRACT

Background: Though factors such as diet, oral hygiene, salivary flow and surface characteristics of the tooth enamel play a role in the causation of dental caries, genetic factors also contribute significantly in influencing the susceptibility or resistance to the occurrence of caries. **Aims and Objectives:** To analyse the relationship between a single nucleotide polymorphism in the vitamin D receptor gene TaqI locus and associate its presence with dental caries in children. **Materials and Methods:** A case control study was conducted.
